Introduction

Strand's new PalettePC theatrical control option builds on the power of the PaletteOS to bring you a high resolution point/click environment to unleash your creativity and speed up programming. At it's core, PaletteOS is all about real world control with simple operation to record cues and set levels, coupled with an intuitive approach to automated luminaire programming. Colors quickly match to the color filters, gobos rotate in RPM speed (not DMX values) and the displays deliver real information that you need all the time. Available in two models (250 channels or 500 channels) there is a cost effective PalettePC to meet your needs. Just supply your own Windows based PC and you're off and running.

Be online and programming in minutes. Output over the network or plug in the supplied USB to DMX adapter for fast and easy outputting to any DMX based system.

Your PC's web browser can be used to configure and monitor your network as well as interact directly with Strand's award winning C21 dimming systems.

PalettePC is an elegant and highly functional theatrical lighting system leveraging industry standard technologies to make it robust and future proof.

So take PalettePC anywhere you need theatrical control. It's as convenient as your PC. Flexible...elegant...PalettePC.
