PLProfile4 LED Luminaires Now Shipping in North & South America

New LED Luminaire completes the family of PL lighting fixtures

Revolutionizing theatrical lighting, Philips Strand Lighting is proud to announce that the Philips Selecon PLProfile4 LED luminaire is now shipping. An innovative combination of LED source technology and precision optical design, the PLProfile4 LED expands the family of PL lighting fixtures and uses four high-power, RGBW LED chips to deliver endless color options along with precise beam control and pattern projections to give lighting designers everything they desire in a powerful and compact spot luminaire.

The PLCyc LED Beautifully Illuminates at the Eisemann Center

The Charles W. Eisemann Center for Performing Arts is one of the leading performance venues serving the Dallas/Fort Worth area, heralded not only for the performances inside, but also for the facility itself. When the facility received a federal grant to make it more energy-efficient, they immediately looked to update the cyc lights, and to do so she chose 44 PLCyc LED luminaires.
